

Water Projects

New Water Distribution System Diamond, MO

CHALLENGE

The City of Diamond needed water system upgrades to provide potable water to areas of the City that had shallow ground water contamination from previous lead and zinc mining activities.

SOLUTION

The Environmental Protection Agency provided funding for an extension of the City of Diamond's public water system. TSE provided preliminary studies, aided in funding application and designed the improvements.

SPECIAL FEATURES

- engineering report
- recommended system alignments and tower site to the City
- EPA Grant application
- DNR Construction permit
- construction plan development of a 250,000-gallon tower, deep well and pump house
- approximately eight miles of water main, installed in private easements
