

# Transportation Experience

## John Carle Industrial Road Claremore, OK

### CHALLENGE

The current roadway infrastructure to the Claremore Industrial Park is disconnected. An expanded road was needed to create a loop from Lowry Road throughout the Industrial Park properties.

### SOLUTION

TSE was selected by the Claremore Industrial and Economic Development Authority (CIEDA) and the City of Claremore to design a 2200 foot long industrial roadway. The City and CIEDA obtained a CDBG grant and paving funds from ODOT to fund a portion of this project. A modified typical section was used with curb on one side of the road and a ditch on the other side. Rogers County has agreed to construct a portion of the roadway as a training exercise for employees. Using the revised typical and County participation the project should be completed with available funds.

### SPECIAL FEATURES

- A stream relocation is necessary for this project which required cooperation from the Army Corp of Engineers
- As mentioned above, a modified typical section was required
- Cooperation between County and Contractor construction crews.

*Existing pre-construction intersection off of Lowry Rd.*

*Existing pre-construction creek bed drainage*
