

Stormwater Projects

Lake Windsor

Belle Vista, Arkansas

CHALLENGE

The Belle Vista Property Owners Association required consultation regarding an upper drawdown for Lake Windsor for lakeshore maintenance.

SOLUTION

TSE recommended removing a portion of the existing spillway weir, excavating an approach channel on the upstream (lake side) of the spillway, adding a discharge channel on the downstream side of the spillway, constructing a concrete retaining wall and installing two 30" sluice gates to allow the lake to be lowered 6 feet

The project is being constructed!
